Brief Description of Company

Synapxe, previously known as IHiS, was founded in 2008 and is a multi-award-winning leader healthcare technology company under the Ministry of Health's agency for the public's healthcare clusters. Synapxe aims to improve Singapore's healthcare by making healthcare more efficiently, more inclusive, more accessible, and safer for patients by creating resilient, intelligent, secure, and cost-effective technological solutions. Synapxe supports more than 70,000 healthcare users in Singapore's Public Healthcare Sector to bring about healthcare transformation through technology.

Job Scope

During my internship at Synapxe, I was responsible to assist my supervisor in the ERP Supply Chain Department for implementation of Warehouse Management System (WMS) Project to the public hospitals. The tasks include understanding what WMS is, how does WMS interface with other pharmacy systems, using the knowledge learned to gather required information from users, communicating with vendors on project matters and taking notes of the requirement users have mentioned during requirement gathering. I was also tasked to liaised with vendors and users for their availabilities on meetings, sending out requirement gathering and demo sessions meeting invites.

Achievements – 2 achievements

During the project, I had a few achievements that I have accomplished, one of them is Requirement Gathering. I worked closely with my supervisor and vendor to ensure that the sessions are being recorded and uploaded, documenting any actions items or requirement, and backing up my supervisor when she is on leave. This has helped to ensure that the meeting minutes the vendors have sent are what they users wishes to have in the system, and it allowed the vendors to check if they had missed out any users' requirements.

The second achievement is communicating with the users and vendors on project matters. I worked closely with them to gather needed information like how many planned users will be using the system, seeking availability of the various parties for important meetings or sessions, and sending out meeting invites to block out users' time and ensure that they are informed of the dates. This has helped to ensure that vendors are receiving the correct set of information that is required from users and ensure that all key parties are present at the planned date for any meetings or sessions or getting their representatives to attend them.

Key Takeaways – 3 key takeaways

At the end of the internship, I had gathered several key takeaways that includes Mentorship, Project Management and Effective Communication. Receiving mentorship from my supervisor has helped me to adapt to the environment quickly, as well as understanding what WMS is. I was being guided on WMS and given many documents to read, this has helped me to be able to understand WMS is. In addition,

whenever I have sought assistance about unclarity of certain parts of any email replies or questions being prompted to me, my supervisor has guided accordingly on how I should reply.

Project Management has taught me that managing a project is not easy as it seems, we are the middleman to help bring in users and vendors together for discussion, some of the requirements users are not versatile and have to be weigh on pros and cons. When I was tasked to seek everyone's availability for the project steering committee meeting, I have faced difficulty in finding the best date as some are unable to make it on the date that most can. In addition, there are some users that did not reply to me due to busy schedules, so I must work with a date where the key personnel are available.

Effective Communication have ensured that what I am tasked to do comes back with the right response, I have understood quickly in what my supervisor needs and communicated with vendors and users for the needed information. When I was tasked to send out email to key personnel on availability by my supervisor, I understood who and what I need to send, therefore sending it out immediately. Even if I was unsure, I will make sure to check beforehand and seek clarifications, this has helped improved my communication skills.

Challenges Faced – 2 Challenges

Throughout the internship, there were some roadblocks that I have faced, one of them was during requirement gathering session, I was unclear of what was being talked about. In addition, as WMS is something that I have not learned in school, the unfamiliarity of what WMS, what SAP or the other pharmacy systems is, uncertainty of their co-relation and interfaces have led to many confusions arising within me.

Another challenge that I have faced is the new working environment, since I am new to the industry and environment, I was taken aback easily when the users is firm about wanting a certain requirement. I would feel reluctant, unsure of should I respond to them, adding on some of the requirement they have requested I am unclear of what it is, which have led me to be confused and taken aback.

What you have done to overcome the challenges faced

In response to the difficulties that I have faced, for the first challenge, I had continuously sought help from my supervisor whenever I am unclear of what WMS is. In addition, at times where there was quite a bit of free time, I had continuously read the documents that my supervisor has given to me to read on my own. I would read and analyze these documents to take down notes, after reading them I would let my supervisor know and we would schedule small sessions to talk about what the documents is about.

And as for the second challenge, based on my observations, many would first allow the opposite party to finish their sentence, assure them and proceed to let them know why they are not able to do it or if they are unsure, they will discuss first before getting back to them. At first, I was taken aback as I did not expect I would be questioned, but from my observations, I have kept calm and answer them. And when I was asked about what I don't know, I will assure them that I will let my supervisor know or ask her about it before getting back to them.
